

Muhammad Fauzi Septiana Putra

Software Engineer

+6281214300906 | muhammad.putra1418@gmail.com | fauziseptians.com

Profile

Software Engineer with 3+ years of experience in web development, focused on applying solid design patterns and best practices to build scalable, high-performance, and maintainable applications.

Skilled in modern frontend technologies such as React.js and Next.js, with a strong emphasis on user-centric solutions and clean code. Experienced working within cross-functional teams using Agile/Scrum to deliver projects on time. Passionate about continuous learning and staying current with the latest trends and best practices in frontend development.

Work Experience

PT BANK CENTRAL ASIA (BCA)

IT Specialist | Apr 2026 – Present

- Developing the Expense Management feature on OCEAN by BCA, a B2B non-financial application that helps businesses manage their operational processes.
- Maintaining release quality by keeping the bug rate below 10% of total QA test cases, through rigorous development and self-testing before handoff.
- Applying React best practices such as code splitting and dynamic imports to keep application performance optimal as feature complexity grows.
- Deepening expertise in Microfrontend architecture with Module Federation, including build-time vs runtime integration strategies across modules.
- Implemented a prefetching strategy within the module federation setup, reducing feature load time from ~6-10 seconds to under 500ms, significantly improving user experience when accessing new modules.
- Actively contributing beyond frontend scope by assisting the team with tracing and debugging via OCP logs — driven by curiosity to understand the system end-to-end, despite being a Frontend Engineer.

PT BANK DIGITAL BCA (BLU BY BCA)

IT Specialist | Jan 2024 – Apr 2026

- Developed core internet banking features — including Payroll Transfer, Single Transfer, and Bulk Transfer modules — for both client-facing and backoffice applications, supporting 1,000+ daily transactions.
- Built and maintained B2B banking modules across 2 platforms (client view & backoffice view), collaborating with cross-functional teams to ensure seamless transaction processing.

- Improved website performance by +15% across Google Lighthouse metrics (Performance, Accessibility, Best Practices, SEO) through code splitting, dynamic imports, and route-based chunking.
- Reduced initial bundle size by ~20%, resulting in faster page load times and improved user experience.
- Implemented Role-Based Access Control (RBAC) system supporting many user roles with complex permission matrices across all frontend modules.
- Wrote unit, integration, and end-to-end tests, achieving ~70%+ test coverage on critical transfer modules.
- Applied SOLID principles, Design System methodology in code reviews, Design Pattern and improving code maintainability across 10+ shared components.
- Integrated Sentry for error monitoring across microfrontend modules, cutting average bug resolution time by ~30%.

PT BANK CENTRAL ASIA (BCA)

IT Intern | Aug 2023 - Jan 2024

- Translated Figma designs into web UI using React JS for 15+ pages/features, maintaining high design fidelity to the original mockups.
- Built 10+ reusable UI components using Vite & React JS, accelerating subsequent feature development by ~20%.
- Developed custom hooks and lightweight state management solutions, reducing code duplication across 5+ modules and improving component reusability.
- Optimized web application performance through lazy loading and image optimization, reducing page load time from ~4s to ~2s.
- Implemented responsive design across all developed pages, ensuring consistent UI across 3 breakpoints (mobile, tablet, desktop).
- Gained hands-on experience with Microfrontend architecture using Module Federation, contributing to 2+ independently deployable modules.
- Explored SQL Server for data querying and debugging, helping identify and resolve 5+ performance-related issues in application-database interactions.
- Supported QA processes by creating 30+ test cases and documenting bugs via Jira, helping reduce miscommunication between Dev and QA teams and supporting on-time feature delivery.
- Maintained bug tracking and progress sheets that improved team transparency, contributing to a ~15% reduction in unresolved issues before release.
- Collaborated with 5+ team members (designers, backend engineers, and QA) in Agile/Scrum ceremonies, including daily standups, sprint planning, and retrospectives.
- Practiced Git version control and branching strategies (feature branching, pull requests) across 20+ commits/PRs, ensuring smooth collaboration and minimal merge conflicts.

- Debugged and resolved 10+ frontend issues reported during QA and UAT cycles, improving application stability before release.
- Participated in code reviews, receiving and applying feedback that improved code quality and helped internalize clean code principles early on.
- Assisted in cross-browser and cross-device testing, ensuring consistent functionality across Chrome, Firefox, and Safari.
- Documented technical implementation notes and component usage guidelines, making onboarding easier for future team members/interns.

Project

Blucommerce — B2B Internet Banking Platform

Contributed to the development of Blucommerce, a corporate internet banking platform (similar to BCA's mobile banking, tailored for B2B clients), enabling businesses to manage payroll transfers, single transfers, and bulk transfers securely and efficiently. Focused on building scalable microfrontend modules, implementing RBAC for multiple user roles, and optimizing performance across the platform.

OCEAN by BCA — Expense Management Feature

Building the Expense Management feature within OCEAN by BCA, a B2B non-financial platform that helps businesses streamline their operational processes. Implemented advanced module federation with prefetching strategy, cutting feature load time from ~6-10s to under 500ms, while maintaining a QA-verified bug rate below 10%.

Wartiwani Industri Nusantara — Landing Page Website

Built the corporate website for PT. Wartiwani Industri Nusantara, a B2B/OEM bag manufacturing company operating since 2001 with 10,000+ units/month production capacity. Designed the site to communicate the company's manufacturing capabilities, product catalog, and partnerships with fashion brands to attract new B2B clients.

Pollution Detection — IoT & Web Application

Built an integrated IoT and web application for real-time pollution monitoring, combining a Next.js dashboard with Arduino-based sensors to visualize environmental data and support data-driven awareness on air quality.

Travelies — Travel Service Marketplace

Developed frontend solutions for Travelies, a travel marketplace platform connecting millions of travelers with destinations and accommodations across Indonesia and beyond, from UI design in Figma to implementation.

Next.js Boilerplate — Developer Productivity Tool

Developed a production-ready Next.js boilerplate featuring Docker support, GitHub Actions CI/CD, and pre-configured ESLint rules, designed to accelerate project setup and enforce consistent code standards across teams.

ZSANSSUI — Open-Source UI Component Library

Created and published ZSANSSUI, a reusable React component library built with Vite and distributed via npm, enabling faster and more consistent UI development across multiple projects.

fauziseptians.com — Personal Portfolio

Designed and built a personal portfolio website to showcase professional experience, projects, and technical certifications, featuring a modern UI, dark/light theme toggle, and optimized performance for a polished first impression with recruiters and clients.

Competency & Familiarity

Programming Languages	JavaScript, TypeScript, HTML, CSS, SQL
Frontend Frameworks & Libraries	Next.js, React.js, Tailwind CSS, Axios
State Management & Data Fetching	React Query, Zustand, Jotai
Development Tools & Code Quality	Git / GitHub / GitLab, ESLint, Prettier, Husky, Vitest (Unit Testing), SonarQube (Code Quality Analysis)
Databases & Caching	PostgreSQL, Redis
DevOps & CI/CD	Docker, GitHub Actions, GitLab CI/CD
Monitoring & Observability	Sentry (Error Tracking & Performance Monitoring)
API & Internationalization	RESTful API Integration, i18n (Internationalization)
Languages	English (Intermediate), Indonesian (Native)

Education

Bina Nusantara University	2021 - 2025
Bachelor of Computer Science GPA : 3.76	

Certificate

HackerRank

Frontend Developer (React)
Software Engineer Intern Certificate
REST API (Intermediate)
SQL (Intermediate)
SQL (Basic)
JavaScript (Basic)
Java (Basic)

Sololearn

JavaScript
